PALATIAL POOL SERVICES

Water Testing AI

Precision Chemical Analysis and Predictive Dosing

Water Testing AI transforms standard water test results into precise, actionable chemical treatment plans. Using a neural network trained on over 500,000 verified chemical reactions, it analyses reagent colours with laboratory-grade accuracy, calculates exact dosing requirements, and predicts chemical interactions — ensuring your water is perfectly balanced every time.

Key Benefits

- Laboratory-grade accuracy from standard test kits
- Exact chemical dosing calculations — no over-treatment
- Predicts chemical interactions before they occur
- Accounts for temperature, pool volume, and seasonal factors
- Eliminates human error in water chemistry management

Technical Specifications

AI Model	CNN trained on 500,000+ verified chemical reactions
Accuracy	Less than 0.01 ppm margin of error
Parameters	Free Chlorine, Alkalinity, Calcium Hardness, CYA, Copper, Iron
Calculations	Langelier Saturation Index with dynamic temperature compensation
Integration	ESP32 Diagnostic Tools, Gods Eye Command Centre

Output	Sequenced dosing directives with interaction modelling
