PALATIAL POOL SERVICES

Wi-Fi Radar

Invisible Safety Monitoring Through RF Sensing

Wi-Fi Radar transforms standard wireless signals into an invisible safety monitoring network around your pool. Without any cameras or optical surveillance, the system detects human presence, movement patterns, and even micro-movements like breathing — providing continuous occupancy monitoring, unauthorised access alerts, and structural integrity tracking, all while preserving complete privacy.

Key Benefits

- Continuous pool area monitoring without any cameras
- Detects presence through walls, fences, and pool covers
- Unauthorised access alerts sent instantly to your phone
- Micro-movement detection for advanced safety scenarios
- Long-term structural monitoring of pool surroundings

Technical Specifications

Technology	Channel State Information (CSI) analysis across 2.4/5/6 GHz
Hardware	Custom ESP32-S3 nodes with enterprise access points
Detection	Occupancy, movement patterns, micro-movements, structural shifts
Processing	Butterworth filters, PCA, Doppler shift analysis

Alerting	Real-time via MQTT over TLS to Comms Hub
Privacy	No optical data — pure RF signal analysis, anonymised processing
