PALATIAL POOL SERVICES
Proprietary Technology

HydroCommand

Autonomous Pool Control System

HydroCommand provides remote monitoring and autonomous control of your pool equipment — pumps, heaters, chlorinators, lighting, and dosing systems — through a single unified interface. Our hardware abstraction layer works across all major equipment brands, with automated fault detection, intelligent scheduling, and cellular failover ensuring your pool runs perfectly around the clock.

Key Benefits

- Remote control of all pool equipment from one interface
- Works across all major pool equipment brands
- Automated fault detection alerts you before problems escalate
- Cellular failover ensures control even during internet outages
- Intelligent scheduling optimises energy usage and equipment life

At a Glance

Control: Pumps, heaters, chlorinators, lighting, dosing systems

Communication: WebSocket over TLS 1.3, 4G LTE failover with IPsec VPN

Protocol: Hardware Abstraction Layer (HAL) for multi-brand compatibility

Fault Detection: Real-time telemetry analysis with automated alerting

Command Handling: Queuing with failover and retry mechanisms

Integration: Gods Eye Command Centre, AquaCommander, Calendar System
