OrbitalScan

Satellite and Aerial Pool Detection

OrbitalScan uses satellite imagery and aerial data analysis to identify and catalogue swimming pools across geographic regions. Advanced image recognition algorithms detect pool locations, estimate dimensions, and assess surrounding property characteristics — enabling targeted service outreach and comprehensive market analysis at scale.

Key Benefits

- Identifies pool locations across entire suburbs and regions
- Estimates pool dimensions and type from aerial imagery
- Enables targeted, data-driven marketing campaigns
- Comprehensive market sizing and territory planning
- Property characteristic assessment for service matching

At a Glance

Data Sources: Satellite imagery and aerial photography

Detection: CNN-based pool identification and classification

Accuracy: High-confidence detection with manual verification pipeline

Output: Geocoded pool database with dimension estimates

Integration: CRM and marketing automation platforms

Coverage: Scalable across any geographic region
